Central management (production environment Installation)	✓	✓	✓
Maximum number of network devices	150	500	1,000
Active directory integration	✓	✓	✓
Firewall Analyzer knowledge transfer and best practices	✓	✓	✓
FireFlow overview and knowledge transfer	✓	✓	✓
Production readiness verification	✓	✓	✓
Risk profile configuration		✓	✓
Geographic distribution/load distribution deployment			✓
Enhanced knowledge transfer (including intelligence policy tuner)			✓
Timeline (workweeks)*	8	10	13

Prerequisites for all JumpStart packages:

- AlgoSec hardware or virtual appliance onsite ready for deployment.
- Successful completion of AlgoSec Admin Training for AlgoSec Firewall Analyzer and AlgoSec FireFlow.
- Secure remote connectivity and security device credentials of all deployed devices for remote access.

* From project kick off, assuming all prerequisites have been fulfilled. Service is performed remotely. AlgoSec will use its best endeavors to complete the deliverables within the target time frame.

ADD-ON ALGOSEC PROFESSIONAL SERVICES OFFERINGS

In addition to the JumpStart packages, we offer a variety of à la carte Professional Services to help you quickly benefit from your AlgoSec investment.

Integration with Existing Change Management Systems (CMS)

AlgoSec enables a quick and smooth integration of your existing ServiceNow CMS with AlgoSec FireFlow in a unique jumpstart package, ALG-SNOW.

Additionally, AlgoSec can seamlessly integrate with other existing CMS, including Remedy, ServiceDesk and others. The integration between your CMS system and AlgoSec can be set up via a Web Services call, and historical change requests can be imported into AlgoSec.

Solution Deployment

This service includes installing your AlgoSec appliances with the most recent build of the AlgoSec Security Management Suite including AlgoSec Firewall Analyzer and/or AlgoSec FireFlow and/or AlgoSec BusinessFlow, then verifying connectivity and defining devices. We will also verify that the reporting functionality works properly for each deployed device, and will provide sufficient knowledge transfer to enable you to perform basic operations in your AlgoSec environment.

Advanced Configuration

Suitable for complex, enterprise environments, this service includes verifying requirements and designing the appropriate topology for:

- High-Availability or Disaster-Recovery modes
- Load Distribution mode
- Geographical Distribution or Central-Manager /Remote-Agent mode

Develop Custom Reports

We can create custom risk profiles and baseline configuration reports to meet your unique needs.

Develop Custom Change Workflows

While AlgoSec includes several out-of-the-box workflows, we can develop custom workflows to meet your unique needs. Customization options include creating the different steps in a change process, managing the ticket lifecycle based on your processes, dynamically routing tickets to required approvers and changing request form fields and appearance.

Project Management and Customer Success Management

We can provide on-going project management to support your AlgoSec implementation. We provide regular status updates and meetings to ensure that the project is on schedule and meets your requirements.
